

Southern New England stumpage price report. 3rd quarter, 2012.

Comments:

1. Need more CHP facilities for biomass stability.
2. Cherry was hot this summer all other species are still down.
3. Scale tight all logs number 2 and better (no pallet) – also wait for delivery.
4. Markets are not great but seem to be holding. The mills are buying wood and trailers are available.
5. shifting my emphasis away from selective logging - going broke.
